

How to add DogeChain to Metamask

The most reliable way to interact with the DogeChain is with Metamask. In order to add the DogeChain network, first click on the network selector and then to “Add Network”.

Enter the following information of the DogeChain to add it to Metamask.

The screenshot shows the Metamask interface for adding a new network. At the top right, there is a dropdown menu showing 'DogeChain' and a circular icon with a red and yellow gradient. Below this is a search bar labeled 'Search in Settings' with a magnifying glass icon and a close button (X). A blue button labeled 'Add a network' is positioned in the top right corner of the form area. The form itself contains several input fields: 'Network name' with the value 'DogeChain', 'New RPC URL' with the value 'https://rpc01-sg.dogechain.dog', 'Chain ID' with the value '2000', 'Currency symbol' with the value 'wDOGE', and 'Block explorer URL (Optional)' with the value 'https://explorer.dogechain.dog'. At the bottom of the form are two buttons: a light blue 'Cancel' button and a darker blue 'Save' button.

Now you are ready to interact with DogeChain.

The token used to pay gas fees is wDOGE (which is wrapped wDOGE).

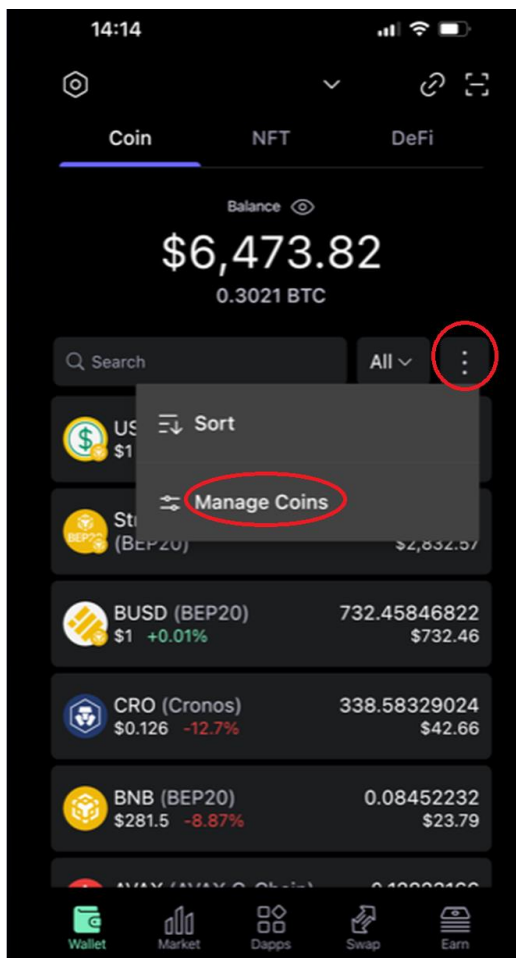

How to buy wDOGE

You need to follow the following steps to purchase wDOGE.

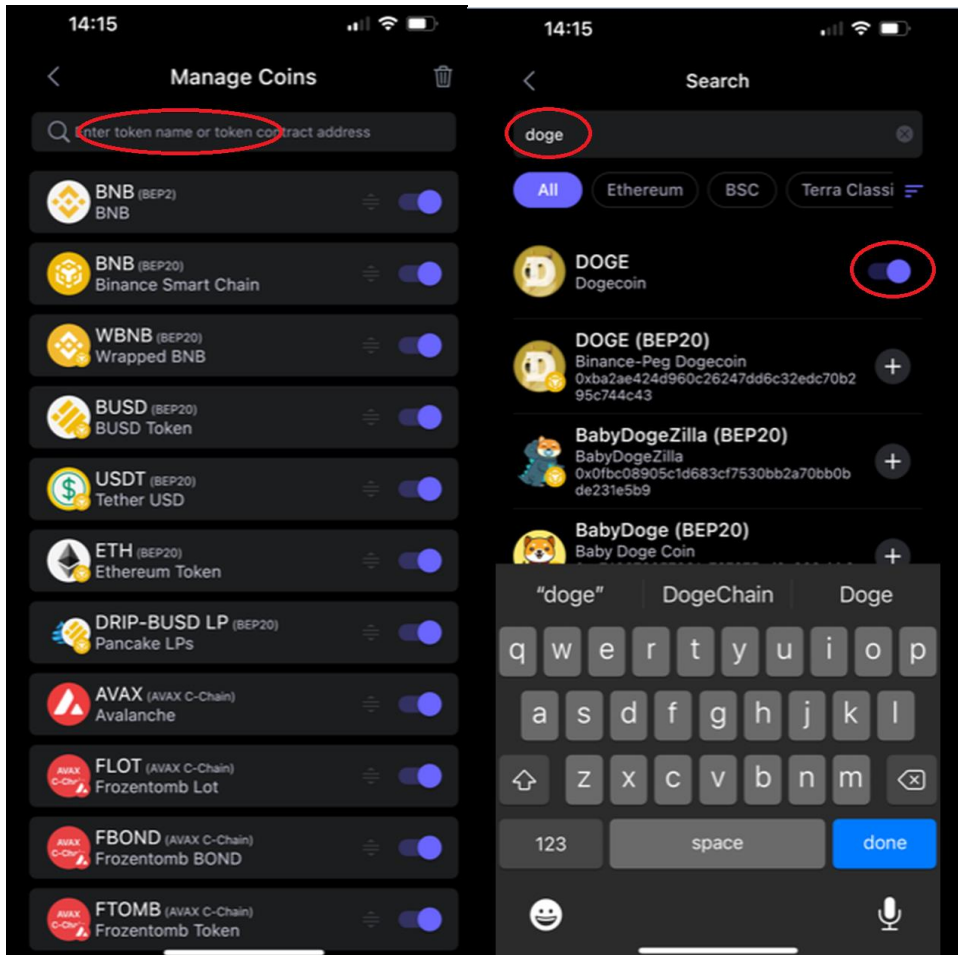

- 1 Purchase DOGE tokens via a CEX or via SafePal.

It is important that you have your DOGE tokens on the Dogecoin network, all other networks (like BEP20, BEP2,...) are not supported.

Before purchasing DOGE tokens you need to add DOGE tokens in SafePal.

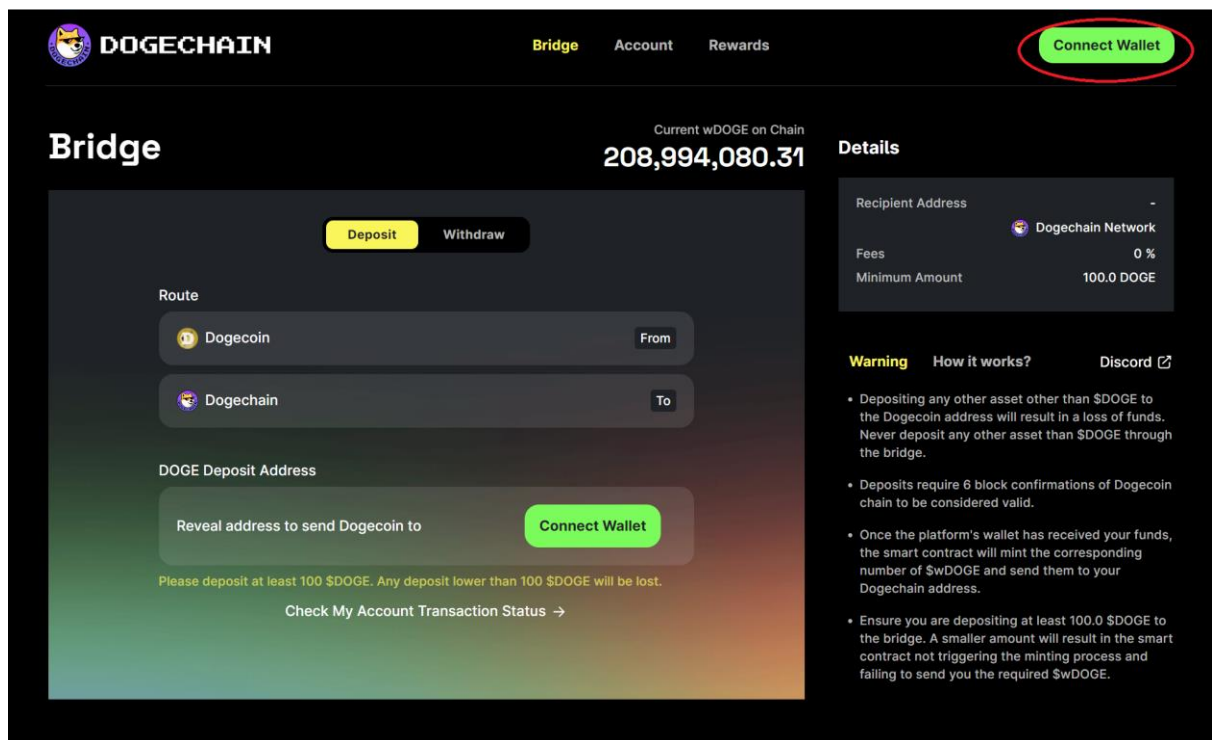

First click on the menu button and then on "Manage Coins".

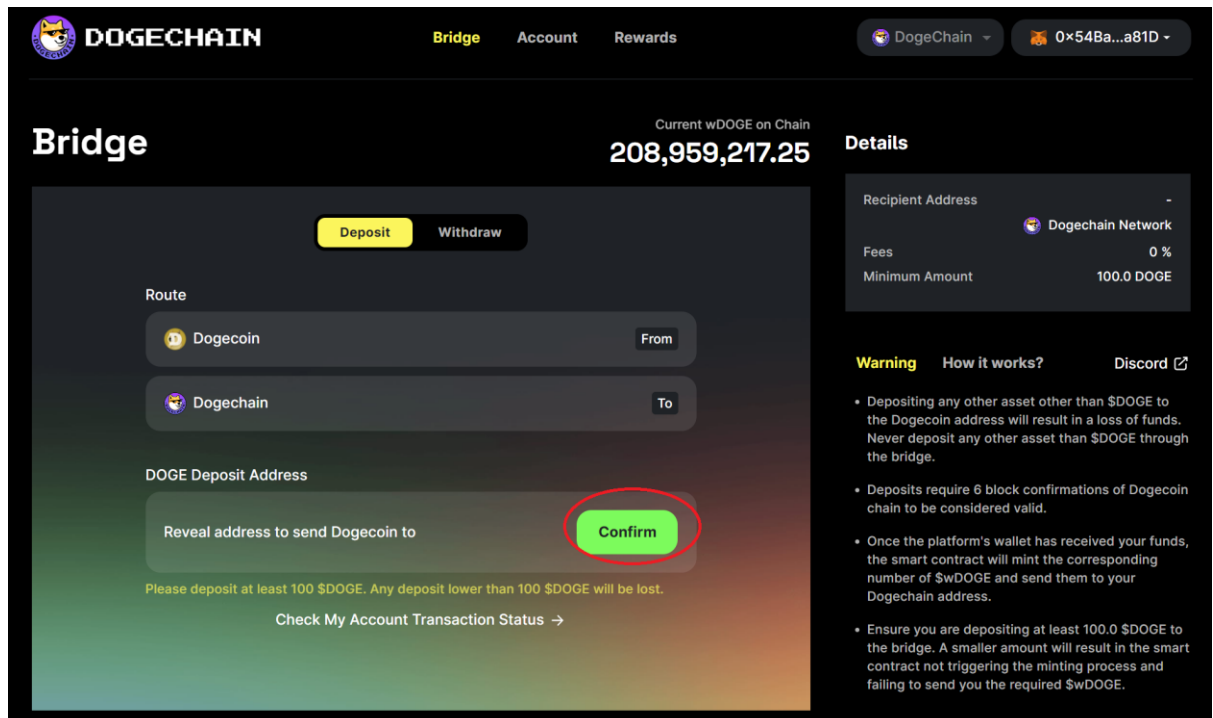

On the search field type DOGE, then activate the DOGE token. Now you will see the token on your list of tokens, there you will find the DOGE address of your wallet.

- 2 Transfer your purchased DOGE tokens from the CEX to your wallet. This step is optional. Some CEXs do not support to transfer DOGE tokens directly to a bridge, therefore this step might be necessary. We verified SafePal and Trustwallet to support DOGE tokens on the Dogecoin network.

3 Go to the website of the DOGE token bridge.

Open the site <https://bridge.dogechain.dog/bridge> and click on “Connect Wallet”. Connect your Metamask Wallet where you previously added DogeChain.

After connecting Metamask, press on “Confirm”, this will reveal the address where you have to transfer the DOGE tokens (which you purchased with SafePal or on a CEX) to.

Be aware that the transfer of the DOGE coins can take several minutes, at the time of writing this document the time for transferring DOGE coins to the bridge takes 7 minutes.

After transferring the DOGE coins to the bridge, the bridge will automatically convert the DOGE coins to wwDOGE, check on Metamask that you received your tokens.
